

Application Performance Profile Chapter for <Your App Name>

This document is intended to provide a simple outline that you can use to capture specific performance elements of your application. For best results, follow this outline using a project Wiki or other shareable resource that can span the life of your project and remain current.

A good performance profile will be comprised of a collection of multiple profile “chapters” like this, the scope of which is dependent on the needs and demands of your particular application.

Table of Contents

Overview.....	2
System Overview.....	3
Description of Profile.....	3
Profile Environment.....	3
Profile Load.....	3
Profile Results.....	3

System Overview

Insert a simple component diagram, or reference to a diagram, of your application, or part of the application, that you are profiling

Description of Profile

Describe the aspect of the application that you are profiling. For example, JVM heap performance, a specific transaction, a database query, etc.

Profile Environment

Describe the environment where the profile testing took place.

Profile Load

Describe the load(s) under which the test was performed. For example, something like this:

Test	Input rate/freq	Input size	Other
1			
2			

Profile Results

Describe the results of the profile exercise, using graphs and images from your profiling tool as much as possible.
